

DENTAL PRACTICE

Clinic Solutions has developed a modular steri centre as an alternative to the imported one currently available. This particular modular system can be arranged in any configuration. The bench top has a red defining line to identify contaminate including waste holes and sharps along with rinse sink. The overhead cupboard has back lighting as well as optional down lights red and green. Provision can also be made for tissues, gloves, etc which can be accessed from under the overhead.

All drawers and doors can have either handles or touch catch release, a unique feature developed by Clinic Solutions to prevent cross contamination, depending on individual requirements. All hardware is Blum Tandem Box Soft Close and modular units can be manufactured to individual requirements in any laminate color or limited vinyl wrap doors. Bench top material can be laminate, solid surface or stainless steel.
